

Libraries and systems check

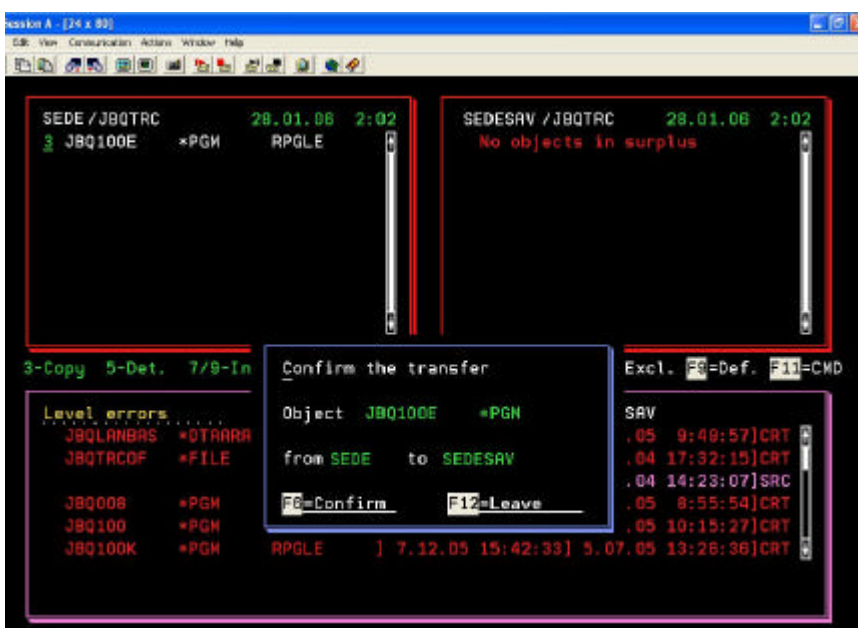

Release 1.0

Libraries and Systems Check (CHKLIB) is an essential tool for the verification and management of congruence of products and libraries on one or more systems. Parallel to a periodic or interactive analysis, it allows verification and aligning of libraries on one or more systems.

- 1) Definition of single or paired systems
- 2) Automatic or manual cataloguing of libraries
- 3) Data summary with highlighting of missing or off level objects
- 4) Detailed data with list of objects
- 5) Temporary or permanent exclusion of libraries / objects
- 6) Exclusion of objects by type

- Status indicators
- Transfer of objects between systems
- Access to all systems
- Execution of contextual commands on paired systems
- TELNET access with transparency, using coded, non-exportable pass-words
- Display of object details with high-lighting of differences between systems
